### ABSTRACT

As we saw there are many types of restaurant and cafe in this world many has different theme ,in restaurant and cafe people used to hang out and had dinner and some snacks as well as coffee , so here the theme of designing the restaurant is wildlife, wildlife is the area where everyone used to see wildlife animals, trees, the good environment mostly greenery, while researching on wildlife restaurant which has exist they give the wildlife look but they didn't use natural many natural things only they used to prefer artificial things such as grass and many more but here in this restaurant or cafe many elements were used which is similar to wildlife such as in interiors that is sustainable materials here artificial grass were used but that is combining of polyethylene or nylon which is not harmful for the environment many sustainable materials were used such as stones, pebbles ,indoor plants, teak and oak wood ,bamboos, thatches, paper meshe ,cladding Wildlife is the fully greenery area where people felt calm and relax ad felt comfortable ,it also felt like fresh area and for aesthetic purpose it is attractive towards the people

**KEYWORD:** sustainable materials, greenery , bamboos, wildlife look, thatches, paper meshe

## **METHODOLOGY**

Explaining about the restaurant and cafe with the theme wildlife by using sustainable materials .

### **What is wildlife?**

Wildlife is an area where we saw the animals and birds in the surroundings also where there were trees , branches , grasses all around greenery is there .

### **What are sustainable materials?**

Sustainable materials are materials used throughout our consumer and industrial economy that can be produced in required volumes without depleting non-renewable resources and without disrupting the established steady-state equilibrium of the environment and key natural resource systems.

### **What are the impacts of sustainable materials?**

If sustainable materials were used then they were not harmful for the environment, they has the durability and also has less maintenance they also keep the environment healthy and safe also does not harm the people also they protect from the many harmful things

## INTRODUCTION

A **Restaurant** is a place where people use to come with family or friends and have dinner or snacks, there were many types of of restaurants have different kind of varieties and themes

A **Cafe** is a place where people used to hang out with friends and have light meals and drinks , they used to drink coffee or tea and have some bake cookies and sandwiches also people used to read the books over there ,in this also many types of varieties and themes were there

## INTRODUCTION OF CAFE AND RESTAURANT (THEME WILDLIFE)

So here designing restaurant and cafe with **wildlife** theme , where people experience the nature and also feel calm because wildlife is the place where people used to see greenery , animals and birds, so in this restaurant and cafe in interiors sustainable materials were used because sustainable materials has large time span which were not effect the environment and some kind of artificial things also ,well also used in outer area

some grasses branches and animals and birds ,entry gate has been design den like shape structure so people feel that they were entering in wildlife

## CHARACTERSTICS

**WALLS:** on the walls artificial grass (combining of polyethylene and nylon) has been used it is not harmful for the environment or people

Paneling and cladding has been used also

**CLADDING:** Stone cladding has been used on the walls ,some stone cladding columns were also used ,in these columns small led bulbs lamps were used which give the candle lighting effect

**NICHE:** on the walls niche were there where stones , pebbles ,bamboos sticks ,paper meshe covering of POP for making it hard animals structure has been used

**CEILING:** for ceiling wooden ceiling has been done ,hanging pots and hanging branches of brown and green colour were used,

On the branches monkeys and some wildlife animals were hanged over there Artificial leaves (combing of polyethylene and nylon) also hanged on the ceiling

**FLOORING:** Wooden texture tile flooring has been done of vitrified material

### **MATERIALS**

For this restaurant and cafe used of stones paper meshe work ,cladding were used such as stone cladding ,wooden cladding In interiors ,frames has been used of thatches and wood furniture were used of wood , but in cafe area the heightened stool has been mold in leg shape, furniture has smooth surface which does not anguished to people ,teak wood and oak wood were used because they both have durability also does not effect

**WOOD:** wood is sustainable materials it has durability and it is long lasting for the environment

For furniture teak wood has been used because teak wood teal wood regulates its own temperature in summer it stays cool while in winter it stays warm ,it has durability and also it gives it natural colour while polishing n teak wood which is also attractive

But on frame oak wood has been used because it is highly resistance ,durable attractive ,water resistance

**ARTIFICIAL GRASS:** While researching on case study the artificial grass has been used which is used on walls and grounds ,that is not squasy , many places it has been used nylon grass which is hard ,so in restaurant if artificial grass were used it should be combining of polyethylene and nylon grass which does not anguish

**TILE :** vitrifies wooden texture tile were used .vitrifies tile were used because it holds on smooth finishing ,it is highly resistant to water dirt and stain

**PAPER MESHE WORK:** paper meshe work were used to making the structure of animals or the other things and finishing of POP so that it made it hard and also give the durability

## **BENIFITS AND LIMITATIONS**

Benefits is that it is relaxable to the mind very calm place ,furniture's are very comfortable and has smooth surface ,it is ventilated, electricity saver and also these materials does not harm the environment also has less maintainace things

## **LIMITATIONS**

- Proper landscaping has been done while working on wildlife theme
- While in plants proper water treatment gas been given

## **CONCLUSION**

In this research paper the learning outcome is that to knowing about the types of sustainable materials where we can used them properly these sustainable materials and also has less maintainace which has durable and also does not harmful for the environment natural things were used such as trees which give the pure and fresh air and also does not harmful for the environment and also it is the best choice for the interiors because of these sustainable materials only get the knowledge about the woods ,thatches and bamboos and also learn about the flooring and ceiling also and for the future it is not harmful for the environment because here no toxic materials were used also people does not feel any kind of suffocation, in interiors the artificial grass were used but that grass is of nylon it is not suitable for environment or people ,if we use the mixture of polyethylene or nylon combination then it does not harmful for the environment,

Creating or enhancing wildlife area is beneficial in that it can bring beauty and enjoyment to our lives. Because wildlife area generally provide native trees and shrubs for cover (protection from predators or weather), they also make places feel more private and relaxing than areas with little vegetation.
